

Project statement:

There are many datasources which produce data about the VMWare stock price, as an investor I want to know if the sites are in sync and if not which one is showing a higher price for VMWare stock.

Requirements:

- This application will be run from the console, and take no input parameters
- Collect the VMWare (VMW) stock price from Google and Yahoo finance every 5 minutes
- Compare the prices to determine if they are equal
- Log the outcome of the check, logging to the console is fine

Required tools:

- Apache-commons-logging
- Maven
- Java 8
- Github

Delivery:

- If you don't already have one, create a github account and send me the username, so that I can add you as a committer to the project
- Create a new branch of this project with some identifier you like (keep in mind this WILL be shared within the company) and push the update to the github repository you got it from
